

HOW PAID SICK DAYS SAVE MONEY AND PROMOTE HEALTH

45% of private industry workers in Louisiana do not have access to paid sick days. Without paid leave, many workers go to work sick because they need the income and because they fear employer penalties if they are absent. **Enacting a paid sick days law can ensure productive businesses, healthy families, and a stronger economy for all.**

The United States has no national paid sick days law, unlike every European country, Australia, and New Zealand.

Workers, families, and the community benefits

Paid leave provides income and lowers the financial stress of individuals and families which promotes health. Paid leave to care for sick children improves their health and reduces the spread of illnesses in day care and schools.

Reduced disease contagion in the workplace and community

Lower employee turnover

Reduced emergency room visits

Employers benefits

Research shows that the benefits to employers of adopting paid sick days outweigh the costs of doing so.

Employers benefit when sick workers stay home as it limits the spread of illness to co-workers and lessens **absenteeism**. Paid sick days reduce **turnover costs** by promoting employee retention and enhance workplace productivity by curtailing impaired work by sick employees.

The economy and public health benefits

The income provided by paid sick days bolsters the local economy as workers and their families are able to continue buying products and services. Reductions in the spread of illness decrease emergency room visits and dramatically lower health care costs. **If all U.S. workers had paid sick days, 1.3 million emergency room visits could be prevented each year, saving \$1.1 billion annually.**

The American Public Health Association recommends that employers adopt paid sick days policies. To ensure coverage for everyone, earned paid sick days laws should be adopted nationally or at the state level.
